- Nice templating for later use, using divs like this is handy if we want to add more buttons later
- Styling looks nice, but a lot of the elements are not centered right. They're all at different heights. Especially for the application list for adding to dashboard.
- You can move the components to the index.s file so the App.js does not have so many react router components, makes the code clearer to read.

You have some hard to read code, adding comments would help others understand it easier.

There is a lot of inconsistency with white lines. Sometimes there are a lot of white lines, sometimes there aren't any. I would recommend having just 1 white line.

You have some weird naming for some of your css(eg. assignment2). It's difficult for others to know what the difference is between assignment and assignment2.

# Merging of the calendar expansion changes into the development branch

Overview 3   Commits 8   Changes 5

The calendar now loads more data from the FHICT API canvas endpoint

You have some code that is hard to understand for someone that doesn't have any knowledge on what you are working on. I would recommend using comments. That way it becomes easier for others to read.

You have internal css. Try to minimalize this by using an external css file and using Id's/classnames.

Serçe,Deren D. @I467481 · 4 days ago   (Maintainer) ☺ 💬 ✏ ⋮

I assume that you are using visual studio code. If you are I would suggest you to format your documents, because some code is annoying to read, because it isn't formatted properly.

1. Certain naming is confusing -> generalApplication and studentApplication would make more sense named something like -> DefaultApplication and IndividualApplication
2. comments are always useful to have
3. New controller contain try/catch but older one doesn't -> try to maintain consistancy in code by either writing new the same or updating older version
